

STREAM ENERGY ILLINOIS, LLC (D/B/A STREAM)

Application and Agreement for Net Metering

Customer: Please complete sections below legibly. A completed application must be mailed to the attention of Stream Operations at the address below. Emailed applications will not be accepted. Upon receipt, Stream’s representative will review the application to determine if it is complete. There may be a delay in providing your records or processing your application if not all sections are completed. Upon acceptance, a copy of the Agreement will be returned to you at the email address you provide below.

- 1. Terms of Service This Application and Agreement for Net Metering together with your Agreement with Stream for energy service is incorporated herein by reference and constitutes the agreement ("Agreement") between you and Stream Energy Illinois, LLC ("Stream"). This Application and Agreement for Net Metering shall terminate in accordance with your Stream agreement. In accordance with 220 ILCS 5, Public Utilities Act as amended (the "Act"), Stream offers electric net metering to Eligible Customers pursuant to the following terms and conditions.
2. Definitions. "Eligible Customer" means a retail customer that owns or operates a solar, wind, or other eligible renewable electrical generating facility with a rated capacity of not more than 2,000 kilowatts that is located on the customer's premises and is intended primarily to offset the customer's own electrical requirements. "Net Electricity Metering" or "Net Metering" means the measurement, during the billing period applicable to an Eligible Customer, of the net amount of electricity supplied by an electricity provider to the customer's premises or provided to the electricity provider by the Eligible Customer. "Eligible Renewable Electrical Generating Facility" is defined as a generator powered by solar electric energy, wind, dedicated crops grown for electricity generation, agricultural residues, untreated and unadulterated wood waste, landscape trimmings, livestock manure, anaerobic digestion of livestock or food processing waste, fuel cells or microturbines powered by renewable fuels, or hydroelectric energy.
3. A customer must be an Eligible Customer to participate in Net Electricity Metering from Stream. If at anytime during the term of this Agreement you are not an Eligible Customer or are otherwise unable to meet the requirements set forth in the Statute or this Agreement to receive Net Metering, you will be required to reimburse Stream for any credits provided to you for Net Metering. Stream is required to provide Net Metering to Eligible Customers until our load of Net Metering customers equals 5% of the total peak demand supplied by us during the previous year. Stream, in its sole discretion, may provide Net Metering beyond the 5% threshold; provided that Stream reserves the right to place a hold on all Net Metering applications received after the 5% threshold has been met.
4. Required Equipment. Your net metering facility shall be an Eligible Renewable Electrical Generating Facility and shall be equipped with metering equipment that can measure the flow of electricity in both directions at the same rate in accordance with Section 16-107.5 of the Act. At all times during the term of this Agreement you shall own and maintain all necessary equipment required for Stream to provide you with Net Metering. Stream shall not be responsible for any equipment owned, maintained or required to be owned or maintained by you under this Agreement. If at anytime during the term of this Agreement the equipment required of you under this Agreement no longer meets the eligibility requirements provided under this Agreement and the Act, you must notify Stream to terminate this Agreement. Failure to notify us may result in charges to you equivalent to credits issued during service under this agreement.
5. Your Electric Generation Service will be billed in accordance with the terms of your energy agreement with us. Net Metering Credits will be measured on the net amount of electricity commodity supplied by Stream as set forth on your bill from your Electric Utility (excluding utility taxes and other utility charges) and in accordance with the terms of this Agreement. If utility consolidated billing is used, your Electric Utility does not provide for net metering credits from Alternative Retail Electric Providers, Stream will maintain records of your credits which you may access by calling us at the toll-free #'s below.
6. Stream shall measure and charge or credit for the net electricity supplied to Eligible Customers whose electric delivery service is provided and measured on a kWh basis and electric supply service is not provided based on hourly pricing in the following manner: A(1) If the amount of electricity used by the Eligible Customer during the billing period exceeds the amount of electricity produced by the Eligible Customer, Stream shall charge the Eligible Customer for the net electricity supplied to and used by the customer as provided in your Stream energy agreement. A(2) If the amount of electricity produced during the billing period exceeds the amount of electricity used by the premise during that billing period, Stream shall apply a 1:1 kilowatt-hour credit to a subsequent bill for service to the Eligible Customer for the net electricity supplied to Stream. Stream shall continue to carry over any excess kilowatt-hour credits earned and apply those credits to subsequent billing periods to offset any customer-generator consumption in those billing periods until all credits are used or until the end of the annualized period. A(3) At the end of the year or annualized over the period that service is supplied by means of net metering, or in the event that the retail customer terminates service with Stream prior to the end of the year or the annualized period, any remaining credits in the Eligible Customer's account shall expire and will not be eligible for payment. B. Stream shall measure and charge or credit for the net electricity supplied to Eligible Customers or provided by Eligible Customers whose electric delivery service is provided and measured on a kilowatt-hour basis and electric supply service is provided based on hourly pricing in the following manner: B(1) If the amount of electricity used by the Eligible Customer during any hourly period exceeds the amount of electricity produced by the Eligible Customer, Stream shall charge the Eligible Customer for the net electricity supplied to and used at the Eligible Customer's premise pursuant to your Agreement with Stream. B(2) If the amount of electricity produced by an Eligible Customer during any hourly period exceeds the amount of electricity used by the Eligible Customer during that hourly period, Stream shall apply a credit for the

net kilowatt-hours produced in such period. The credit shall consist of an energy credit and a delivery service credit. The energy credit shall be valued at the same price per kilowatt-hour as Stream would charge for kilowatt-hour energy sales during that same hourly period. The delivery credit shall be equal to the net kilowatt-hours produced in such hourly period times a credit that reflects all kilowatt-hour based charges in the Eligible Customer's electric service rate, excluding energy charges. C. Stream shall credit for the net electricity supplied to Eligible Customers whose electric delivery service is provided and measured on a kilowatt demand basis and electric supply service is not provided based on hourly pricing in the following manner: C(1) If the amount of electricity used by the Eligible Customer during the billing period exceeds the amount of electricity produced by the Eligible Customer, then Stream shall charge the Eligible Customer for the net electricity supplied to and used by the Eligible Customer as provided in Illinois Residential & Small Commercial Terms and Conditions and Rate Plan Summary. The Eligible Customer shall remain responsible for all taxes, fees, and utility delivery charges that

would otherwise be applicable to the net amount of electricity used by the Eligible Customer. C(2) If the amount of electricity produced by an Eligible Customer during the billing period exceeds the amount of electricity used by the Eligible Customer during that billing period, then Stream shall apply a 1:1 kilowatt-hour credit that reflects the kilowatt-hour based charges in the Eligible Customer's Illinois Residential & Small Commercial Terms and Conditions and Rate Plan Summary to a subsequent bill for service to the customer for the net electricity supplied to Stream. Stream shall continue to carry over any excess kilowatt-hour credits earned and apply those credits to subsequent billing periods to offset any customer-generator consumption in those billing periods until all credits are used or until the end of the annualized period. C(3) At the end of the year or annualized over the period that service is supplied by means of net metering, or in the event that the Eligible Customer terminates service with Stream prior to the end of the year or the annualized period, any remaining credits in the customer's account shall expire.
